Supplements for Digestive Health & Function

All products are completely compatible as helpful supplements in support of the following situations:

Natural Dietary Supplement to Support Gastro-Intestinal Health and Function

For Gastric Problems

- Before training for girthy horses or those sensitive when ridden
- Recommended to give in a small pre-exercise feed with lucerne chaff OR an oil paste over the tongue before riding
- Can provide in the feed daily for horses which are picky, slow or reluctant eaters
- Usually given daily for 2-3 months, then as required when riding or travelling – ie 3-4 days per week before riding
- Pre-travelling and pre-competition feed or paste to improve willingness to work, eat and drink after travelling (does not swab or contravene FEI/Racing Rules)
- Compatible and highly complementary to omeprazole drugs prescribed for Gastric Ulcers - a natural supportive supplement with different actions and ingredients

Multi-Action Digestive Supplement for Hindgut Health in all Horses

To Maintain a Healthy Stomach and Help Hindgut Digestive Problems

- In the feed daily as a premium digestive supplement with multiple actions & benefits for all horses
- Flexible and safe higher rate to help horses with scouring, hindgut problems or problems with hindgut acidosis
- Particularly supportive for senior or older horses with poor digestive capability to maintain weight and condition
- Recommended along with Gastro-Coat for horses on hard feed diets or in regular racing and equestrian competition
- Easy and economical to feed long term at all supplementation rates, does not build up and does not swab – legal for all competitions

Some Common Signs of Gastric Problems

(including Stomach Acid Irritation that may lead to Gastric Ulcers)

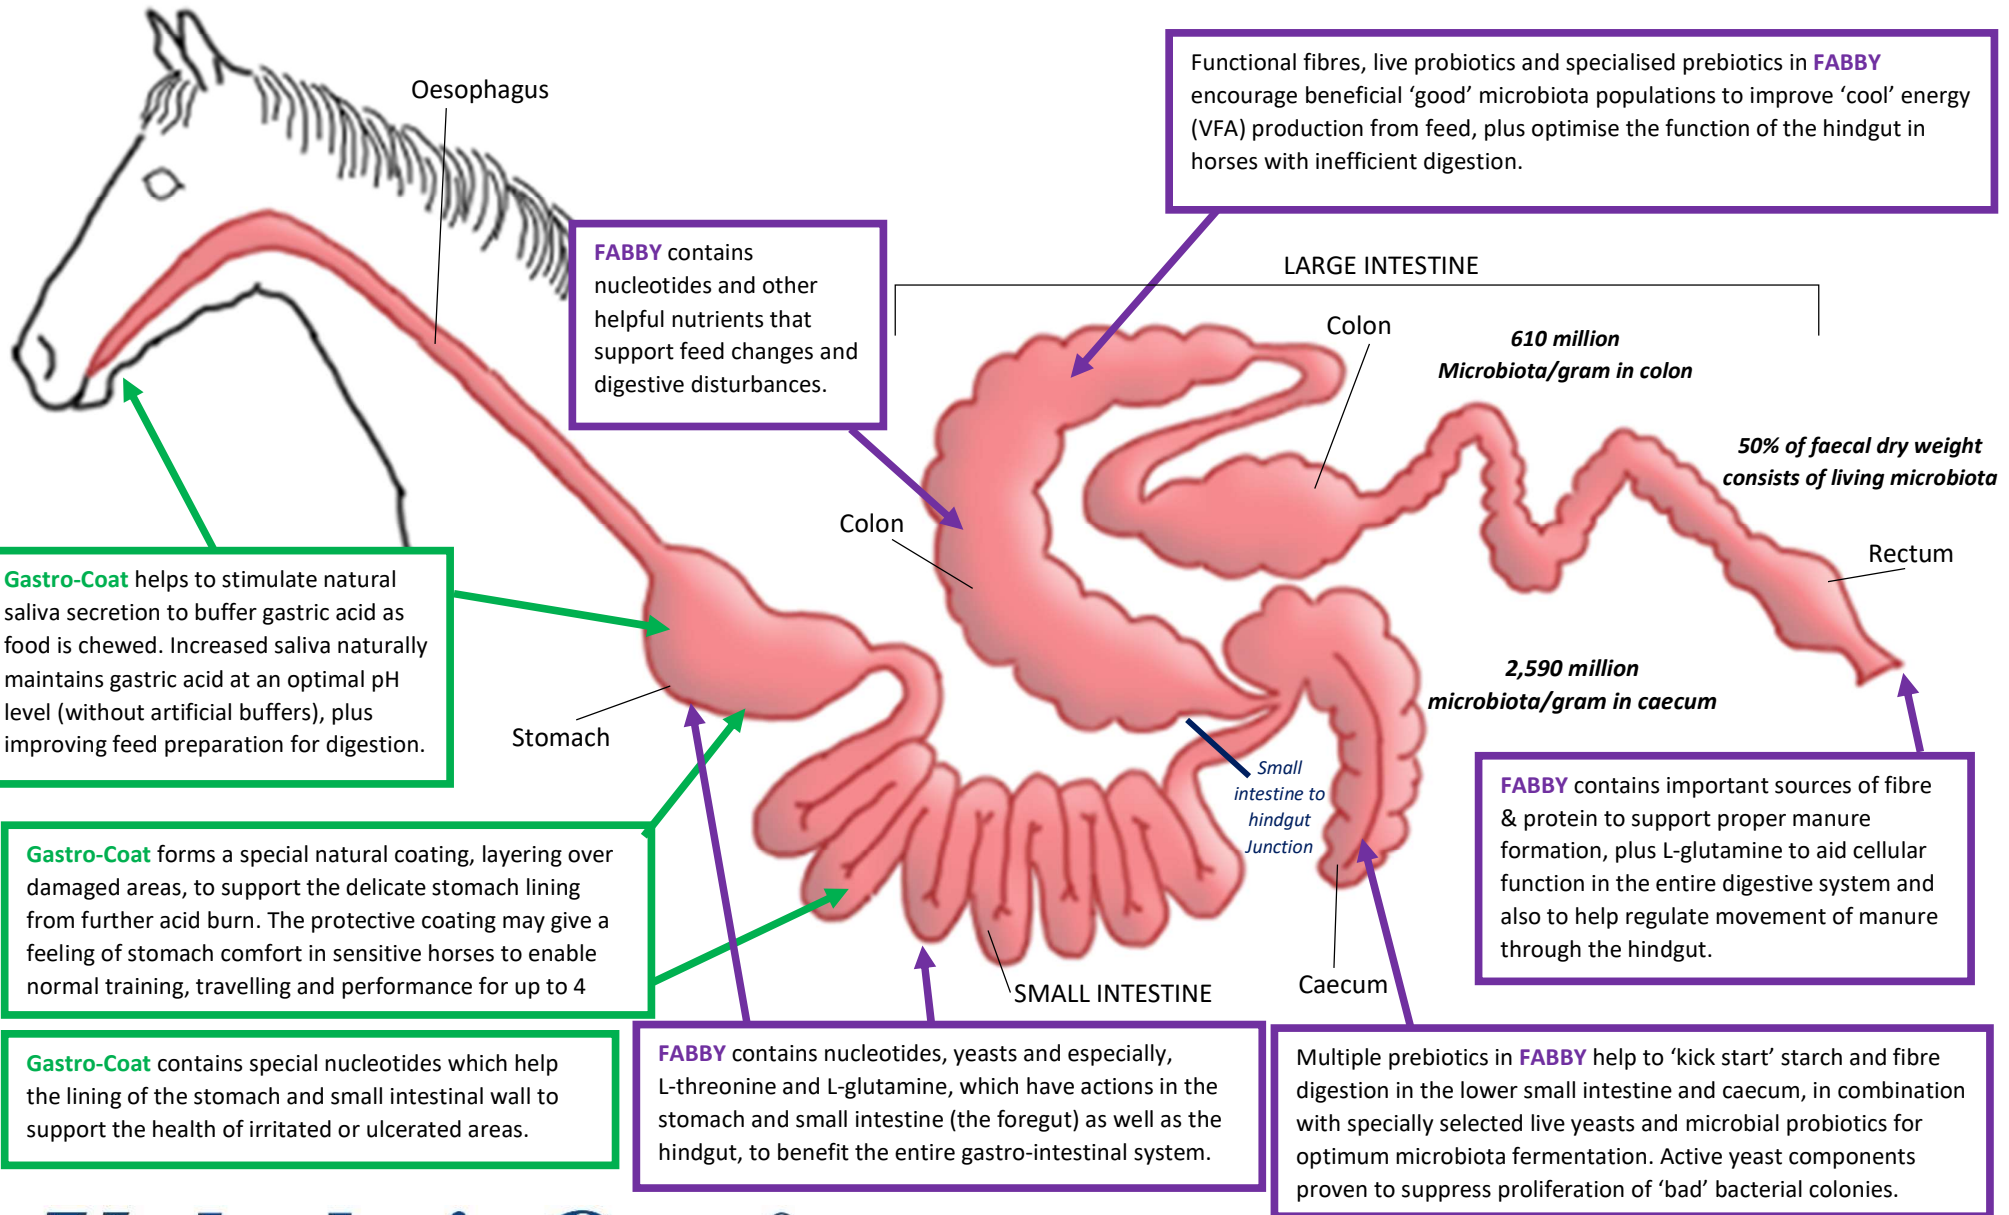

- ✓ Girthy, touchy around girth area, “dragon” behaviour
- ✓ Reluctant to canter, drops out of canter
- ✓ Sensitive to leg when ridden, won't go forward, collect or perform
- ✓ Picky or slow eating, won't eat hard feed, prefers hay or grass
- ✓ Windsucking, crib biting

Some Common Signs of Hindgut Problems

- ✓ Poorly digested particles in feed, smelly or ‘cow pat’ manure
- ✓ Scouring or intermittent loose manure, especially after sudden feed, hay or grass changes
- ✓ Sensitive to touch around flank or when rugging
- ✓ Variable ridden temperament, random spooky behaviour
- ✓ Sensitive skin, rough & dull coat, poor doer / hard keeper
- ✓ Aged horses slow to recover after winter or often lose condition in hard times
